

# WAXEDWOOD® BROWN Softwood with a natural appearance

## Preserved wood with a natural brown appearance

WaxedWood Brown is a preserved timber based on a high-grade treatment with a built-in water repellent and a natural brown color. Based on a vacuum pressure treatment, the timber is protected against wood decay. At the same time, a mixture of wax is impregnated. This water repellent additive provides extra protection against moisture. This results in a product which has an increased dimensional stability, reduced maintenance requirements, and has a range of applications.

## Independent guarantee of 15 years possible

The brown version of WaxedWood will have the same quality properties as the known WaxedWood. This means it is possible too for WaxedWood Brown to offer an independent guarantee of 15 years for projects for wood decay, fungi, and insects. WaxedWood Brown will weather towards a grey appearance similar to tropical hardwood.

## WaxedWood Gold as premium product

Besides WaxedWood in an appealing brown color, we also offer a high-end cladding product made from Northern European Pine, Western Red Cedar, and Siberian Larch in the natural brown color with the label WaxedWood Gold. The combination of a high-grade treatment and top-quality timber provides the opportunity to offer a 25-year guarantee for cladding applications on an independent foundation.

Project: Treecabins camping 'de Koeksebelt' NL  
Design: Wout Lamberink & Erik ten Brummelhuis

## Exclusive look

The timber immediately offers an exclusive appearance similar to expensive (hard)wood species. This offers a solution for projects and applications where a brown color is desired but without the need to apply this separately.
