DERAKO® - FORECO® Façade system

DERAKO® - FORECO®

A combination of unique strengths

The DERAKO® FORECO® façade system is the result of the strategic collaboration between Derako International B.V. and FORECO Dalfsen B.V. FORECO specialises in sustainable and innovative timber solutions for the construction industry and DERAKO is a progressive player in the field of development, processing and the use of wood for unique ceiling, wall and façade systems. By using the FORECO NobelWood® slats within the DERAKO façade system it is now also possible to use this product on façades without the need for (pre) drilling, screwing or nailing. The façade system is easy to assemble and needs no maintenance from a technical point of view. The organically modified NobelWood also meets the social sustainability needs because of its unique characteristics. The various FORECO products can also be used in DERAKO ceiling and wall systems.

DERAKO façade system ...

- Fastening on the rear, completely invisible
- Slat fastening without screws or nails - avoids damage and corrosion stripes
- Fully detachable system
- Internal and external applications
- Horizontal or vertical placement of the slats
- 100% recyclable materials
- Quick and easy installation
- Modular delivery ideal for prefabricated construction
- Project support and design freedom - your creativity is our guide

with FORECO NobelWood®
